

COVID-19 VACCINE

MYTHS VS FACTS

Health System

✗ MYTH

The COVID-19 vaccine is not safe because it was rapidly developed and tested.

✓ FACT

The quick response does not mean that safety protocols or testing were skipped. Safety is always the top priority.

✗ MYTH

I already had COVID-19 and I have recovered, so I don't need to get a COVID-19 vaccine.

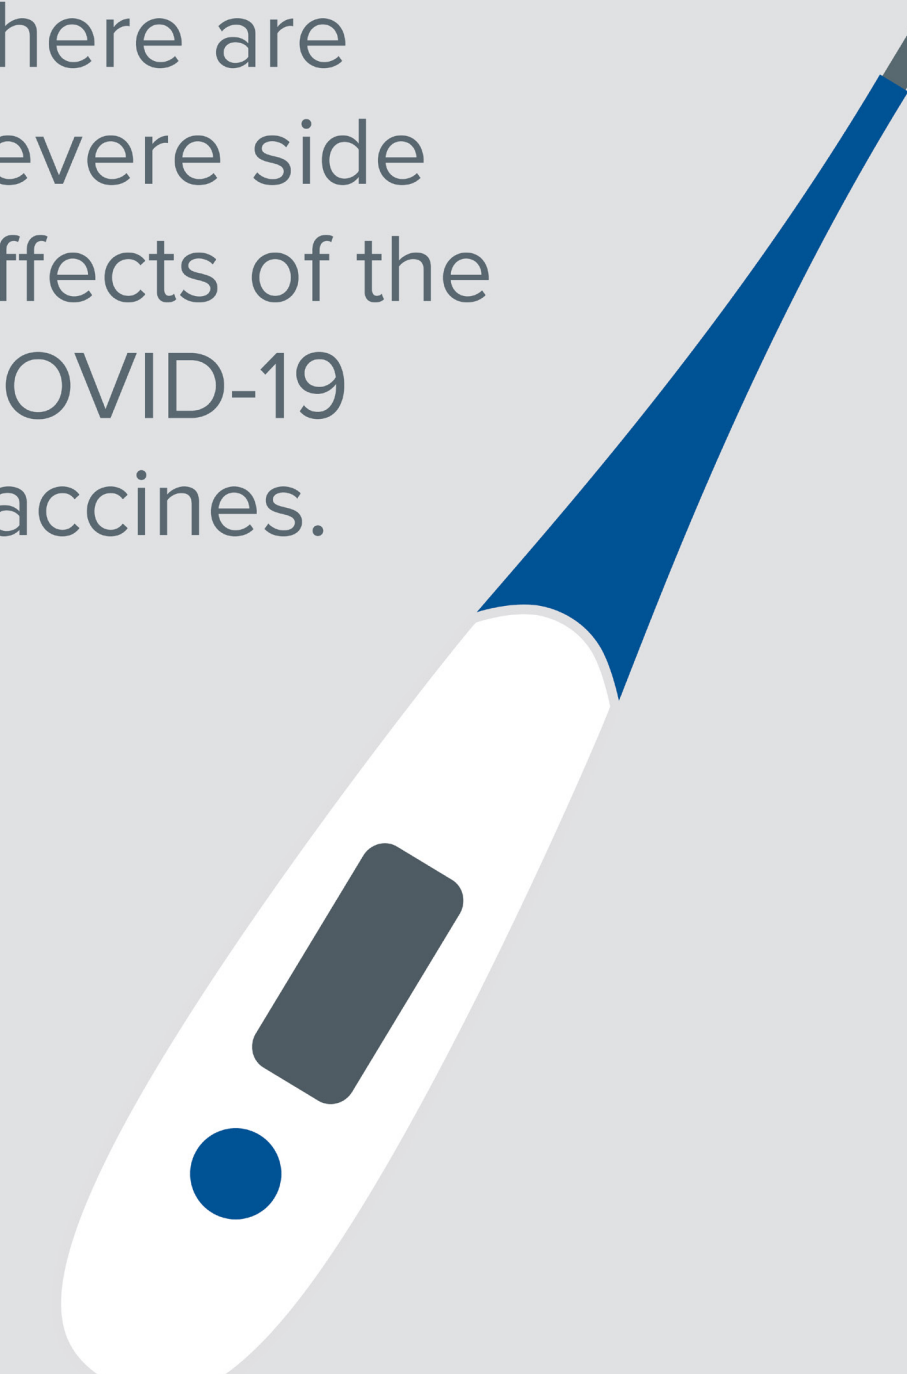

✓ FACT

Natural immunity from getting COVID-19 varies from person to person, so it is still recommended to get the vaccine.

✗ MYTH

There are severe side effects of the COVID-19 vaccines.

✓ FACT

Mild side effects can last for a day or two, but they indicate that your immune system is responding to the vaccine.

✗ MYTH

I won't need to wear a mask after I get vaccinated for COVID-19.

✓ FACT

The vaccine may prevent you from getting sick, but precautions such as mask-wearing, hand washing and physical distancing will still be important.

✗ MYTH

COVID-19 vaccines will alter my DNA.

✓ FACT

Messenger RNA (mRNA) vaccines do not contain live COVID-19 virus and will not interact or change the DNA of your cells.

✗ MYTH

COVID-19 vaccines were developed using fetal tissue.

✓ FACT

Neither the Pfizer nor the Moderna COVID-19 vaccines contain fetal cells.

✗ MYTH

COVID-19 vaccines cause infertility or miscarriage.

✓ FACT

COVID-19 vaccines have not been linked to infertility or miscarriage.
